

CREATE CLOUDWATCH

1. In AWS search bar , search CloudWatch.
2. In Aws dashboar , chose metrics and then All metric.
3. Then chose EC2 in menu.

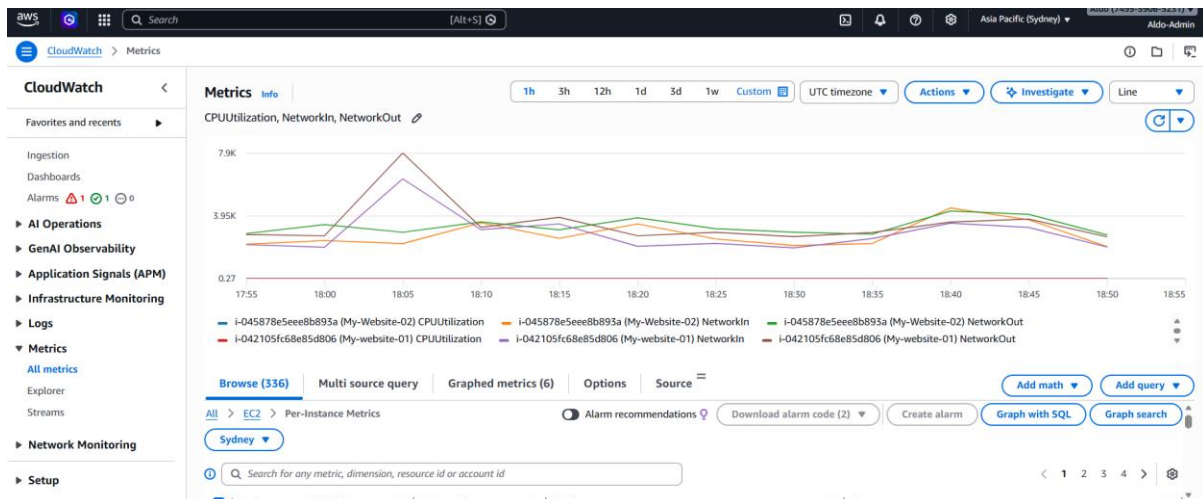

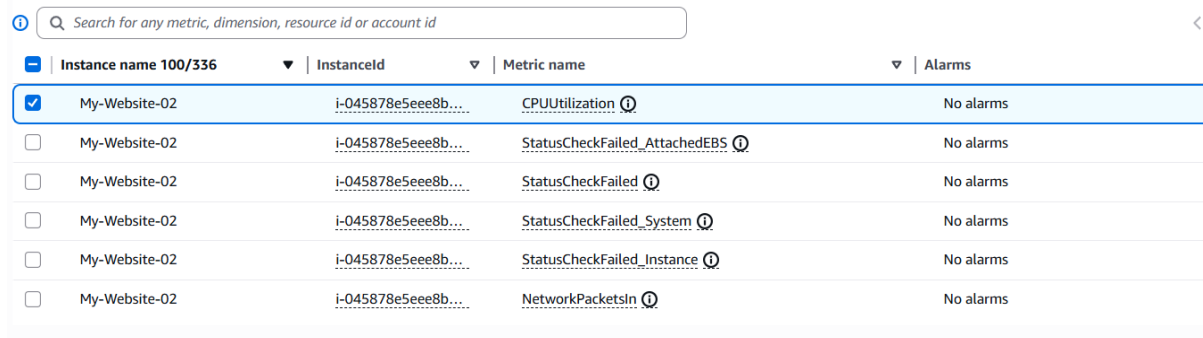

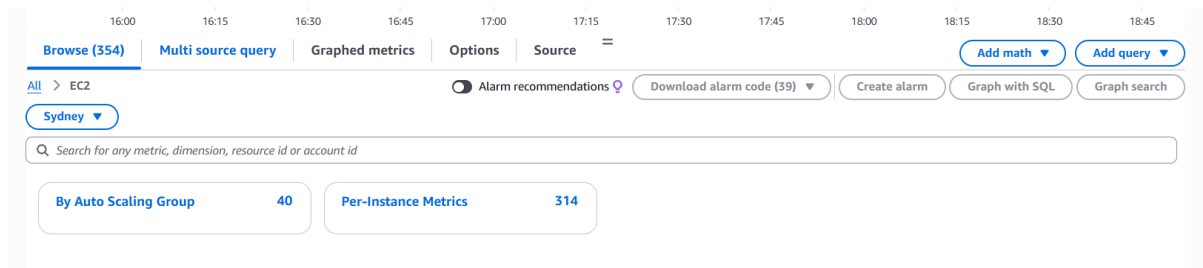

4. In EC2 dashboard chose Pre-Instance Metrics.

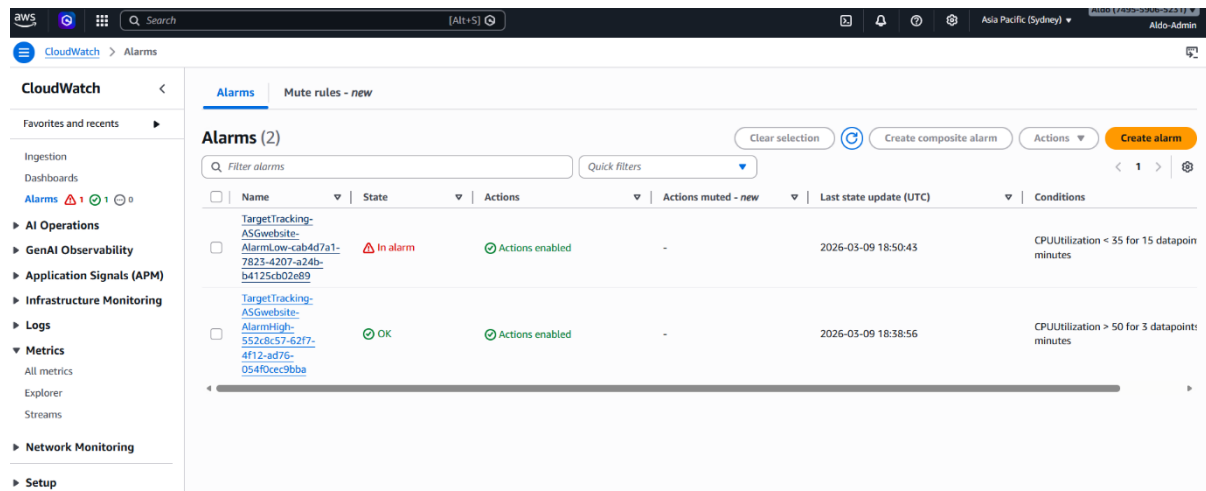

5. Then search “you instance name” , and Metric name “CPUUtilization”.

6. And then you will see graphic metrics you CPUUtilization.

7. In AWS dashboard click Alarms. (here we will create some alarm for monitoring CPUUtilization if threshold more then 50%).

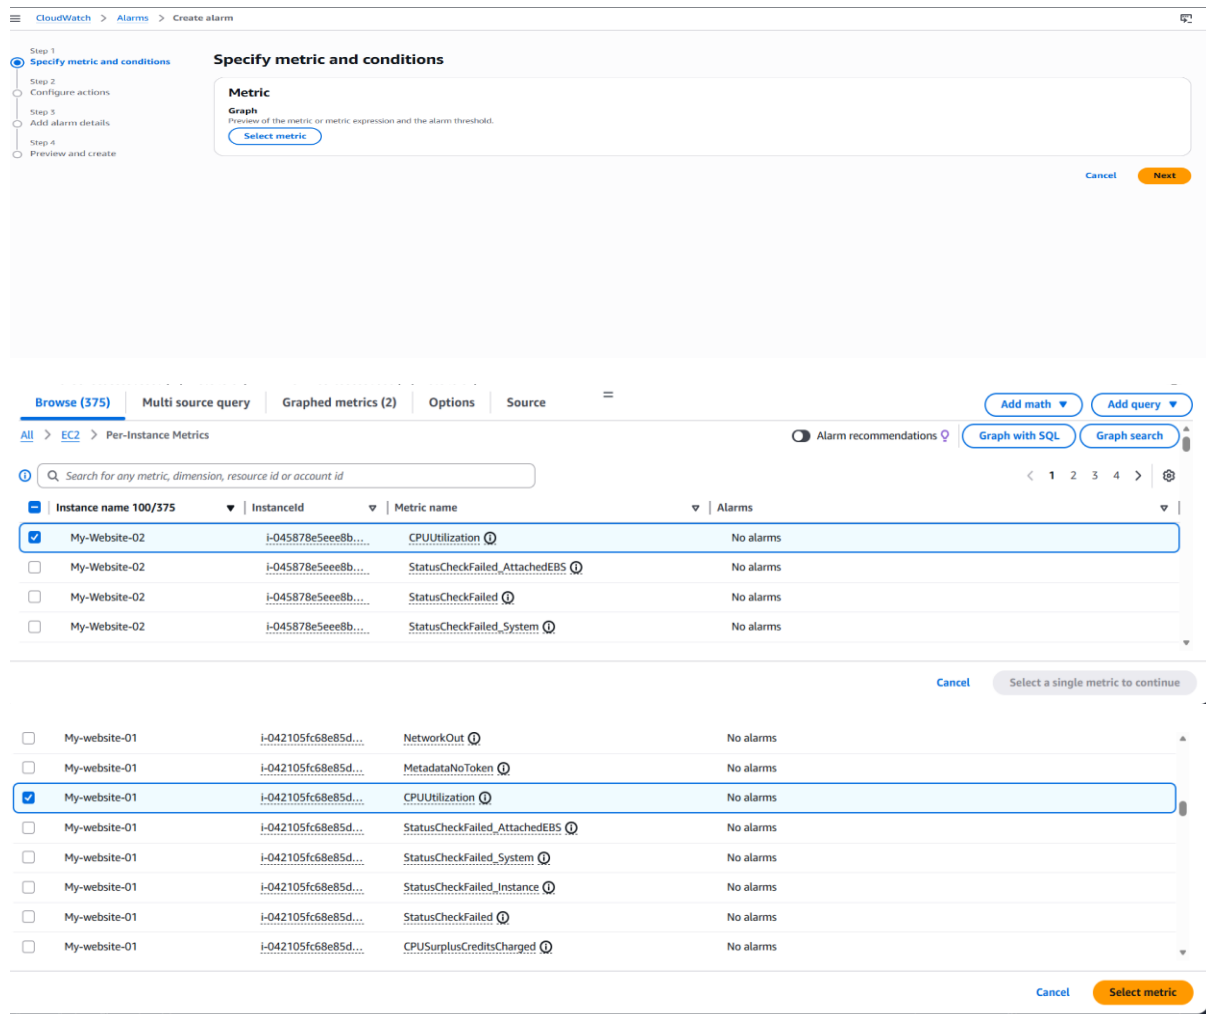

8. In dashboard Alarm , click create alarm.

9. Step 1 , select metric.

10. Then chose you “instance name” and metric name CPUUtilization.

11. Click select metric.

12. Step 2 , configure your alarm ,give metric name , statistic(Average) , and period (5Minutes).

CloudWatch > Alarms > Create alarm

Step 2: Configure actions

Step 3: Add alarm details

Step 4: Preview and create

Metric

Graph

This alarm will trigger when the blue line goes above the red line for 1 datapoints within 5 minutes.

Statistic

Average

Period

5 minutes

13. In condition dashboard , Chose Treshold type (static),Define alarm condition (chose Greater > threshold), and give define the threshold value (50).

Conditions

Threshold type

Static

Use a value as a threshold

Anomaly detection

Use a band as a threshold

Whenever CPUUtilization is...

Define the alarm condition.

Greater > threshold

Greater/Equal >= threshold

Lower/Equal <= threshold

Lower < threshold

than...

Define the threshold value.

50

Must be a number.

Additional configuration

Datapoints to alarm

Define the number of datapoints within the evaluation period that must be breaching to cause the alarm to go to ALARM state.

1 out of 1

Missing data treatment

How to treat missing data when evaluating the alarm.

Treat missing data as missing

14.In notification alarm state trigger chose alarm.

15. Send a notification to the following SNS topic cchose create new topic.

16. Create name topic and then use your email for receive notification.

17. Click create topic.

Notification

Alarm state trigger

Define the alarm state that will trigger this action.

In alarm

The metric or expression is outside of the defined threshold.

OK

The metric or expression is within the defined threshold.

Insufficient data

The alarm has just started or not enough data is available.

Send a notification to the following SNS topic

Define the SNS (Simple Notification Service) topic that will receive the notification.

Select an existing SNS topic

Create new topic

Use topic ARN to notify other accounts

Create a new topic...

The topic name must be unique.

Cloudwatch01

SNS topic names can contain only alphanumeric characters, hyphens (-) and underscores (_).

Email endpoints that will receive the notification...

Add a comma-separated list of email addresses. Each address will be added as a subscription to the topic above.

user@example.com

Required

user1@example.com, user2@example.com

Create topic

Add notification

18. Step 3 add alarm details.

19. Give your alarm name in alarm name.

20. In description just fill with a notification about alarm you created.

21. Click next then click create alarm

The screenshot shows the 'Add alarm details' step in the AWS CloudWatch console. On the left, a progress bar indicates the steps: Step 1 (Specify metric and conditions), Step 2 (Configure actions), Step 3 (Add alarm details - selected), Step 4 (Preview and create). The main area is titled 'Add alarm details' and contains two sections. The first section, 'Name and description', has a text input for 'Alarm name' containing 'CPUUtilization'. Below it is a text area for 'Alarm description - optional' with the text 'This is CPUUtilization trshold'. A note below the text area states: 'Up to 1024 characters (50/1024)'. A blue box contains a note: 'Markdown formatting is only applied when viewing your alarm in the console. The description will remain in plain text in the alarm notifications.' The second section, 'Tags - optional', shows 'No tags associated with the resource.' and a button 'Add new tag'.

22. In here you will see notification Succesfully created alarm.

23. Go to your email , and then subscribe you topic alarm.

The screenshot shows the AWS CloudWatch Alarms console. At the top, there are two notification banners: a green one saying 'Successfully created alarm CPUUtilization.' with a 'View alarm' button, and a blue one saying 'Some subscriptions are pending confirmation' with a 'View SNS Subscriptions' button. Below these, the 'Alarms' tab is selected, showing a list of alarms. The list has columns for Name, State, Actions, Actions muted - new, Last state update (UTC), and Conditions. There are three alarms listed: 1. 'CPUUtilization' with state 'OK', actions 'Actions enabled Warning', and condition 'CPUUtiliza minutes'. 2. 'TargetTracking-ASGwebsite-AlarmLow-cab4d7a1-7823-4207-a24b-b4125cb02689' with state 'In alarm', actions 'Actions enabled', and condition 'CPUUtiliza minutes'. 3. 'TargetTracking-ASGwebsite-AlarmHigh-552c8c57-6277-4f12-ad76-054f0ce9bba' with state 'OK', actions 'Actions enabled', and condition 'CPUUtiliza minutes'. The left sidebar shows the 'CloudWatch' navigation menu with options like 'Ingestion', 'Dashboards', 'Alarms', 'AI Operations', 'GenAI Observability', 'Application Signals (APM)', 'Infrastructure Monitoring', 'Logs', 'Metrics', 'Network Monitoring', and 'Setup'.
